

Create your own QRcodes (Quick Response)

Quick Reference Guide

There are a lot of resources for creating QR codes, two of them are referenced below.

YouTube has a few videos for them too.

For example go to the following link or scan the QR code and go to this YouTube video for some helpful information.

<https://www.youtube.com/watch?v=bZdI2YM4938>

There are several websites that allow you to create your QRCode on the fly

<http://www.qrcode-monkey.com/>

or scan this

<http://www.qrstuff.com>

or scan this

So, why do you want to know how to do this?

Maybe you want to make finding websites easier for your students when they are doing their research / homework at home.

for example You are teaching the history of the Erie Canal and want the students to read up on the building of the Erie Canal System. You could tell them to go to your favorite website

http://www.archives.nysed.gov/projects/eriecanal/essays/ec_larkin.shtml

or you could just have them scan a bar code into their mobile device and have it go there for them.

OR

You want your students to check their math skills and understanding but the website you want to direct them to is

http://www.ixl.com/promo?partner=bing&campaign=1425&adgroup=Sitelink+-+Math+Practice&utm_source=bing&utm_medium=cpc&utm_term=math%20worksheets%20for%20nd%20grade&utm_campaign=Search+-+Grade+Levels+-+Exact+-+US

This is super long but if they can just scan the QR code on their mobile device it would look like this on the assignment sheet.

There are many uses for QR codes. These are just a few.
